SKILLS

Programming Languages	JavaScript | TypeScript | HTML | CSS | Bash | C | C# | Python
Technologies	AWS S3/EC2 | Docker | React | Node.js | Tailwind | Next.js | SQL | NoSQL | Git

EXPERIENCE

ProDiagnostics Medical Center — Sep 2024 - Present
IT/Software Developer — *Acworth, GA*

- Developed and implemented an automated email template application for sending pre-formatted emails, improving efficiency in patient communications.
- Assisted with basic IT and networking tasks to support office operations.
- Currently designing and developing a responsive and bilingual website for the medical center, featuring contact information, services, and patient intake forms.

Maximotor — Mar 2021 - Feb 2024
Shop Manager — *Marietta, GA*

- Engaged directly with customers to diagnose issues, providing detailed estimates and timely updates on repair status.
- Trained and mentored four individuals with no prior experience, enabling them to independently perform complex mechanical tasks within six to twelve months.
- Designed and developed a website for the shop using the MERN stack, showcasing services and contact options.
- Coordinated with vendors and sourced parts, including from salvage yards, ensuring cost-effective and timely repairs.

Village Garage — Sep 2018 - Feb 2021
Technician — *Atlanta, GA*

- Engineered custom solutions for older vehicles with hard-to-find components, showcasing creativity and resourcefulness.
- Collaborated with customers to deliver tailored repairs and modifications, meeting their specific needs.

NOTABLE PROJECTS

Tomato Duck - Pomodoro Timer with Duck Chatbot — 2024
https://tomato-duck-v2.vercel.app/ — *Atlanta, GA*

- Implemented using React for front end, Express server for back end, and MongoDB for database management. Utilized Tailwind CSS with Daisy UI for styling, JSON Web Tokens passed through http-only cookies for authentication, TypeScript for enhanced code quality, NodeMailer with handlebars.js for email styles, and Zustand for global state management. Integrated an AI-powered chatbot using OpenAI technology.
- Front end deployed on Vercel, back end deployed on Render, and code is hosted on GitHub: Tomato Duck GitHub.

Maximotor — 2023
https://maximotor.vercel.app/ — *Marietta, GA*

- Developed Maximotor, a MERN Full Stack website for an auto repair shop, showcasing shop services, contact information, and user authentication features.
- Utilized TypeScript for enhanced code quality, Chakra UI for frontend styling, MongoDB Atlas cluster for database management, Node/Express server deployed on Render, Vite/React frontend deployed on Vercel, and code hosted on GitHub: Maximotor GitHub.

Tech Blog — 2022-2023
https://technology-blog-spot.herokuapp.com/ — *Atlanta, GA*

- Developed a Tech Blog, a generic blog site featuring user authentication and server-side rendering for enhanced performance.
- Implemented using SSR with Express and Handlebars.JS for server-side rendering, MySQL for data persistence, and Bootstrap for simplistic styling. Hosted as a monorepo on Heroku, and code is available on GitHub: Tech Blog GitHub.

Ivan Escobar - Professional Portfolio — 2023
https://www.ivanfelipe.com/ — *Atlanta, GA*

- Built using React and written in TypeScript, with styling done using Tailwind CSS with Daisy UI components. Integrated animations using Framer Motion. Includes links to project repositories and contact information.

EDUCATION

Flex Full Stack Web Development Certificate — Oct 2022 - Apr 2023
Georgia Institute of Technology — *Atlanta, GA*
